

P3

3.1

The results of integer and division can only be a whole number

3.2

3.3

For this variable, double is the data type

FinalGrade is the initialization for it which for a variable would use camel case as seen in the example for naming convention

Assigning is when the variable is equated to the value 94.5

Memory allocation would look like for in this case a double making sure there is a decimal even if the value was 94 in memory it would be stored as 94.0

P4

```
Public class Quiz1{
    Public static void main(String[ ] args){

        Final double PIE_NUMBER = 3.14;

        double radiusNumber = 5.137;

        Double Volume = 4/3 * PIE_NUMBER * radiusNumber * radiusNumber * radiusNumber;

        system.out.println("volume of sphere is " + Volume);

    }// end of main
} //end of Quiz1 class
```
